

GROWING YOUR OWN - NURTURED BY NATURE

HAMPSHIRE GARDENS

The team at The Marketing Collective enjoy a good potter around a garden, which is why we created Hampshire Gardens back in 2016, a collaborative initiative grown with love to showcase the beautiful gardens and spaces across the county. Gardening is extremely therapeutic for the mind and body. So, during our current enforced, simpler way of life we've taken to our gardens, veg plots and pots. AND WHAT'S BETTER STILL - you don't need to find seeds! Here's how you can grow your own with what you've got!

SPRING ONIONS

LEEK & FENNEL Place root ends in the water - don't fully submerge them, change the water daily. In 3-5 days growth begins harvest when full then repeat the process.

LEMON GRASS: harvest lemon grass once it become a foot tall, no need to uproot the plant.

TOMATO

Cut a tomato into slices, place and then cover with compost and wait!

GARLIC

Submerge garlic clove halfway in moist in soil. The larger the clove the larger the resulting bulb will be. Sit the plant in a sunny window, keeping the soil moist. The bulbs will be ready for harvest in the early summer when the bottom 1/3 of leaves have yellowed.

GINGER

Soak the chunk of ginger overnight. Submerge in moist soil. Keep watering until shoots appear. Ready to harvest in a year, remove the entire plant and use what you need.

ONIONS

Plant root end and lightly cover with soil, keep soil moist. Carefully separate the new onions, leaving the roots attached and plant them outside. Occasionally cut the leaves down to promote full growth. It can take up to 5 months for plants to be big enough to harvest.

MUSHROOM

Use a mixture of compost and soil in a pot. Plant the mushroom stalk in the soil with only the surface of it exposed. keep it warm and in low light. If the cutting takes, new growth happens quickly, harvest and repeat.

CABBAGE

ALSO... CELERY, BOK CHOY & ROMAINE LETTUCE

Submerge the roots leaving the tops above. Spray with water a couple of times a week, replacing the water every few days. Leaves

will sprout in about a week. Plant the cutting with only the leaves above the soil. Harvest when fully grown about 5 months.

About Hampshire Gardens, a destination marketing project by The Marketing Collective

Hampshire is a garden-lovers destination where there are associations with some of the great names in gardening history; Discover borders bursting with spring bulbs, herbaceous summer planting, rich autumn shrubberies and unique winter gardens.

THERE ARE GARDENS FOR EVERY SEASON - SO COME AND EXPLORE #hampshiregardens Follow on Instagram @Hampshire_Gardens
